Immunizations for Each Age Group

1 Month
A baby should receive the first dose of Hepatitis B vaccine.

6 Months
A newborn is only recommended to get their first dose of Hepatitis B, if they did not receive it during birth.

12 Months
A baby should only get their second dose of Hepatitis B, if they did not receive it during birth.

18 Months
A 2 month old baby may also have their second dose of Hepatitis B.

2-3 Years
This is the age range for all 4 doses of the inactivated poliovirus. Two doses of the inactivated poliovirus (IIV only) are recommended for children ages 1 through 3 years.

4-6 Years
The third dose of the inactivated poliovirus is recommended for children ages 4 to 6 years, and one dose of the poliovirus is recommended for children ages 7 to 18 years.

6-12 Years
Firstborns should receive the first dose of Hepatitis A, Mumps, measles, pertussis, Haemophilus influenzae type b, and Pneumococcal conjugate.

9-18 Years
Catch-up period between 7 to 18 years, for the following: first dose of Hepatitis A, Mumps, measles, pertussis, Haemophilus influenzae type b, and Pneumococcal conjugate.

19-23 Months
During this age range, a newborn or child can receive the third dose of Hepatitis B.

15-18 Years
A newborn or child can receive the first dose of Human papillomavirus (HPV) vaccine.

18-23 Years
A newborn or child can receive the second dose of Hepatitis B, if they did not receive it during birth.

11-12 Years
For children 11 to 12 years of age, 1 dose of HPV is recommended, followed by a second dose at 15 to 20 years. Two doses of HPV are recommended at 11 to 12 years.

13-15 Years
Catch-up period for the first dose of Hepatitis B, Mumps, measles, pertussis, Haemophilus influenzae type b, and Pneumococcal conjugate.

16-18 Years
A newborn or child can receive the third dose of Hepatitis B, Mumps, measles, pertussis, Haemophilus influenzae type b, and Pneumococcal conjugate.

19-23 Years
A newborn or child can receive the third dose of Hepatitis B, Mumps, measles, pertussis, Haemophilus influenzae type b, and Pneumococcal conjugate.

Special Notes for High-Risk Children and Special Cases
TrueCare was aware about the health of your child, we never doubt being there for all your concerns about their health. However, there are some special conditions and footnotes that need to be accounted for during the vaccination process.

For children over 18 years old, we refer you to the Centers for Disease Control and Prevention for the most up-to-date information.

Children need a period of growth and development, so it's important that you keep them on track with their exams and their immunization schedule. Childhood is a period of growth and development, so it is important that you keep them on track with their exams and their immunization schedule.
