Immunizations at a Glance

Complete pediatric care for your little ones.

keep them on track with their exams and their immunization schedule. At **TrueCare**, we put you and your family's health first. If you're uncertain about which immunizations are due, feel free to give us a call. We are here to help!

Childhood is a period of growth and development so it is important that you

Immunizations for Each Age Group

A newborn is only recommended to get Hepatitis B (HepB) in order to assist with their weakened immune system.

1 Month A baby should only get their second dose of Hepatitis B (HepB), as their immune systems are still developing and introducing too

many vaccines too early may cause them harm. 2 Months

A 2 month old baby may also have their second dose of Hepatitis B (HepB)

at this time. They will also need the first dose of the following vaccines: Rotavirus (RV), Diptheria, tetanus & pertussis (DTaP), Haemophilus influenzae type b (Hib), Pneumococcal (PCV), and Inactivated poliovirus (IPV). 4 Months

by a second dosage of the previous 2 month vaccinations: Rotavirus (RV), Diptheria,

Catch-up period for Hepatitis B (HepB), followed

tetanus & pertussis (DTaP), Haemophilus influenzae type b (Hib), Pneumococcal (PCV), and Inactivated poliovirus (IPV).

Diphtheria, tetanus & pertussis (DTaP), and Pneumococcal (PCV).

6 Months

A period of time between 6 months and 18 months is recommended for the

third dose of **Hepatitis B** (**HepB**). A third dose is recommended for

Special conditions may apply for the third dose of Rotavirus (RV) and Haemophilus influenzae type b (Hib). The third dose of Inactivated Poliovirus (IPV) spans between 6 months and 18 months. Influenza (Flu) (IIV only) in 1 or 2 doses begins at 6 months and spans until 18 months. 9 Months A catch-up period for the following vaccines' third dose: Diphtheria,

tetanus & pertussis (DTaP) (9 through 12 months), Haemophilus

influenzae type b (Hib), and Pneumococcal (PCV).

Involves previous vaccines in addition to the following: first dose of Measles, mumps & rubella (MMR) (12 to 15 months), first does of Varicella (12 to 15 months), and a 2-dose series of

Involves previous vaccines in the addition to the introduction of the 4th dose of **Diphtheria**, tetanus & pertussis (DTaP) (15 to 18 months).

12 Months

months and 19-23 months). COVID-19 Vaccine is also recommended for ages 6 months+

Hepatitis A (HepA) (between 12

18 Months In addition to previous vaccine periods, the following vaccines enter a catch-up period: Haemophilus influenzae type b (Hib)

15 Months

3 years), and Varicella (18 months to 3 years). **19-23 Months** This age group introduces has no new

(18 months to 4 years), **Pneumococcal (PCV)** (18 months to 4

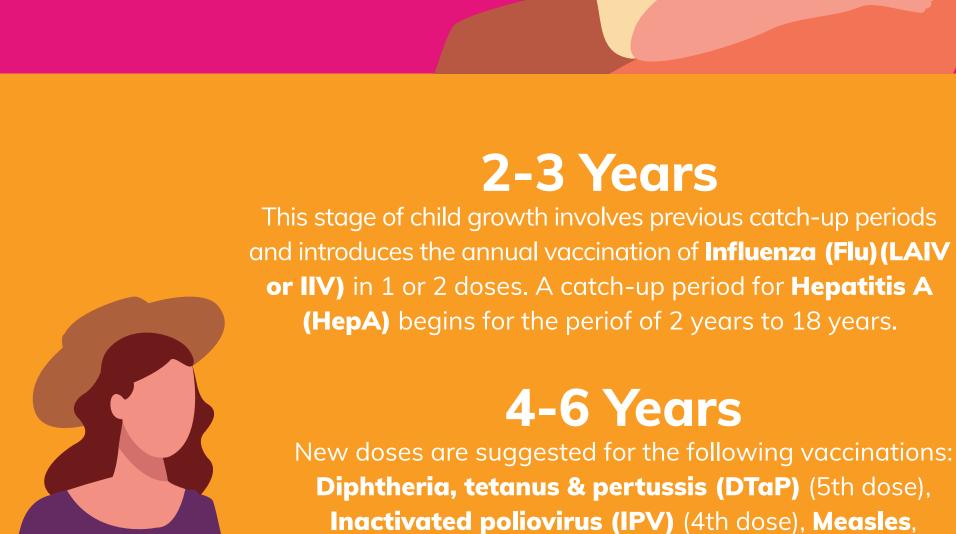

years), Measles, mumps & rubella (MMR) (18 months to

& pertussis (DTaP) (19 months to 3 years), and Inactivated poliovirus (IPV) (19 months to 3 years).

vaccines or dosages, but is a catch-up

period for the following: **Hepatitis B (HepB)**

(19 months to 18 years), **Diphtheria, tetanus**

and Varicella. An annual vaccination of Influenza (Flu) (LAIV or IIV) in 1 dose is also recommended between 7 and 18

mumps & rubella (MMR) (2nd dose), and Varicella

(2nd dose). A catch-up period begins for both

Haemophilus influenzae type b (Hib) and

Pneumococcal (PCV) between 4 to 18 years.

7-10 Years

Catch-up period between 7 to 18 years

Measles, mumps and rubella (MMR),

for **Inactivated poliovirus (IPV)**,

years. A preliminary period for **Tetanus**, diphtheria, & pertussis (DTaP) begins. **11-12 Years** First dose of Meningococcal, Tetanus, diphtheria, & pertussis

(DTaP), and a 3-dose stage of Human papillomavirus (HPV).

13-15 Years Catch-up periods for Meningococcal, Tetanus, diphtheria, & pertussis (DTaP) (13 to 18 years).

recommended for 16 to 17 year olds, with a catch-up period at age 18.

16-18 Years

No new or final vaccines are introduced

and involves numerous catch-up periods.

A booster for **Meningococcal** is

Special Notes for High-Risk Children and Special Cases TrueCare cares about the health of your child, no matter how young they are. Each vaccination has special conditions for children who are high-risk or has other special health cases. Contact us today to learn more. Each vaccine has special conditions and footnotes that need to be accounted for during the vaccination process.
